Keywords: Visual Basic 6.0

Abstract:

Writing consists of four chapters, where the first chapter explains the background of problems in the importance of maintaining the security of data so that the data we have can not be viewed or manipulated by others.

On the second chapter, the authors make a basic theories used to solve the problem in the first chapters. Besides there are also explanations on the types of programs used to assist writers in completing the problems with computer.

Analysis of problems and their solutions are explained in the third chapter, where an explanation of the method and how to solve the problem were performed using the method described in previous chapters. Here are given also how to run the program, explanation of the program that the author made and the design of its output.

The conclusion of this chapter is contained in chapter four is that of a data security is important, even more so on the current era of computerization, where the use of computers as a tool of man in completing the work is felt to increase.
